- 19 neil curry, 85, eco-logic1@mweb.co.za, Male
- 20 Amalia Esterhuysen, 48, Female

## Testimonials after 4 weeks of use:

My skin feels softer and looks more radiant. It helps a lot with dry patches.

**Collette van Schalkwyk**

There was very little change the first week. So much so I forgot to take a picture. But from the second week onwards things radically improved. My skin started improving drastically.

**Jannik Joubert**

Unfortunately it only lightened my pigmentation a little bit so maybe if used over a longer period it would have better results. I suppose the harm is much deeper in my skin tissue thus the poor results.

**Melda Nieuwenhuizen**

Improved elasticity, less oily bridge, more moisture

**Wilrich Niehaus**

Discoloration lighter, wrinkles less 'deep', skin tone more even

**Tracey Cumming**

## Testimonials - continued

I had the absolute pleasure of testing the latest offering - Turritopsin™.

Firstly, it is a silky and rich textured cream - I have fair, dry skin and am always looking for creams that enrich and hydrate my skin - and Turritopsin™ did this instantly, yet without leaving an oily / glossy residue but rather a matte finish; this is the sign of a highly developed product because it can be worn at any moment of the day, while delivering the most nourishment usually reserved for the "night time" creams that govern the skincare market.

Being fair, my skin is sensitive - and since using it this morning, I have noticed a reduced redness, a softness and a hydration that feels like it is filling my pores with delicacy.

It said that the face shows what is going on internally; it holds the secret to all the inner imbalances and imperfections. I have had it all, from dryness right through to acne - and a skin care routine is crucial for my self care. I am so grateful and thrilled that not only does Turritopsin™ contain nourishment for the skin, but a salve.

I started with my second cream with Turritopsin™ since the beginning of the trial and the results are so visible, the feeling on your skin when you put it on is instantly visible and smooth. I am in love with this cream would love to put it all over my body. For a more youthful appearance. Will definitely make the most of this week's special. Love all your remedies.

Turritopsin™ not only revolutionises the act of holding happiness in the palm of our hand, it effortlessly allows us to sing it back to the universe and watch beauty in all life reflect in ourselves.

With so much love, respect and gratitude for this wondrous creation

The trial evaluated multiple parameters, including skin hydration levels, skin texture, reduction of fine lines and wrinkles, overall skin appearance, and participant satisfaction through self-assessment questionnaires.

## Results:

1. **Skin Hydration:** The use of turritopsin™ led to a statistically significant increase in skin hydration levels among the participants. Skin moisture content improved, resulting in enhanced skin barrier function and a decrease in dryness and roughness.
2. **Skin Texture:** Participants reported an improvement in skin texture, with smoother and more even skin tone and reduced appearance of blemishes and acne scars. Objective assessments by dermatologists also revealed a visible reduction in roughness and unevenness.
3. **Fine Lines and Wrinkles:** The infused skin product demonstrated promising results in reducing the appearance of fine lines and wrinkles. Participants noticed a decrease in the depth and visibility of facial lines, particularly around the eyes and mouth.
4. **Overall Skin Appearance:** The majority of participants reported an improvement in overall skin appearance, including increased radiance and a healthier complexion. The skin product contributed to a more youthful and rejuvenated appearance.
5. **Participant Satisfaction:** Self-assessment questionnaires indicated high participant satisfaction levels with the product. Participants expressed satisfaction with the product's efficacy, ease of application, and overall experience.

**Safety:** The trial did not report any significant adverse reactions or safety concerns associated with the use of the product. Participants generally found the product well-tolerated and suitable for long-term use.

**Conclusion:** The results of this clinical trial suggest that incorporating Turritopsin™ for dermatological applications can offer several benefits. The product showed positive outcomes in terms of increased skin hydration, improved texture, reduced fine lines and wrinkles, and overall enhanced skin appearance. The absence of notable safety concerns further supports the viability and potential of Turritopsin™ as an ingredient in skincare products.

Further research and a larger-scale study to explore the underlying mechanisms is ongoing.
